

Species: Mule Deer

Unit Group: 115

Hunt Geometry ID: 40

Hunt ID: [131, 107]

Access: Access is good with varying degrees of road quality. Highways 6/50, 93, 894, 487 and 21 (Utah) provided paved access in and around the area. There is a good network of 2-track roads throughout this unit. The quality of these roads varies and can change depending on current weather conditions.

High clearance vehicles and extra spare tires are recommended. Hunters should watch the weather forecast, as winter snowstorms can drastically alter road conditions and hunter access.

Vehicles and mechanized equipment, including wheeled game carriers are prohibited in Wilderness. Contact the Federal Land Management Agency responsible for the area you intend to hunt for more information.

Recommended Hunting Areas: Unit 115 has fair deer density. Much of the higher elevations are in the national park and closed to hunting. The west side of the unit from Lincoln Canyon north to Strawberry Creek has good deer numbers. On the south end of the unit, Johns Wash, Murphy's Wash, Big Spring Wash, and Red Ledge are good deer areas, especially late in the year. Lexington Canyon can have good deer numbers and gets better late in the year.

Biologist Comments: Hunters need to know where the Great Basin National Park Boundary is.
HUNTING IS NOT ALLOWED ON GREAT BASIN NATIONAL PARK.

Most hunters want snow to push deer out of the national park. While snow does push deer out of the national park, too much snow can make hunter access difficult.

Private property generally does not limit access in this area. Hunters do need to know where private property is located and obtain permission before hunting or crossing private property.
