

**Species:** Antelope

**Unit Group:** 251

**Hunt Geometry ID:** 7

**Hunt ID:** [411, 8375889, 274, 675]

**Access:**

Hunters can access the unit via US Highway 6. There are main access roads in Stone Cabin Valley and Reveille Valley. The Kawich Wilderness Study Area limits motorized traffic. Private land parcels have very little influence on hunter access. This hunt unit borders the Nellis Air Force Range which is closed to the public. This area is fenced and is subject to high security control.

**Recommended Hunting Areas:**

Antelope are generally associated with water sources during August. Sources of water within the harvest unit vary from perennial streams to small springs and agriculture/livestock waters. Generally, hunters can develop a good picture of where to start looking for antelope by first becoming familiar with a map, which identifies various water sources. Small-localized antelope population segments can be found at scattered spring sources and livestock ponds throughout the unit. Most antelope in this hunt unit can regularly be found in Stone Cabin and Reveille Valleys. In recent years, more antelope are residing in proximity of the pivots near the entrance of the test site and in Stone Cabin Valley. Ralston and Railroad Valleys also hold antelope, and although densities are typically lower, these valleys usually receive less hunter pressure.

**Biologist Comments:**

Full services are only available in the town of Tonopah. Minimal services are available at the town of Rachel located on state highway 375. Generally, primitive camping, with few developed campsites describe this hunt unit.
