

**Species:** Mule Deer

**Unit Group:** 121

**Hunt Geometry ID:** 50

**Hunt ID:** [326, 135, 112, 277, 133, 860, 196, 195, 111, 391, 328]

**Access:** Access is good with varying degrees of road quality. There is a good network of 2-track roads throughout this unit. The quality of these roads varies and can change depending on current weather conditions. Access to McDermid Creek is blocked by private property.

High clearance vehicles and extra spare tires are recommended. Hunters should watch the weather forecast, as winter snowstorms can drastically alter road conditions and hunter access.

Vehicles and mechanized equipment, including wheeled game carriers are prohibited in Wilderness. Contact the federal land management agency responsible for the area you intend to hunt for more information.

**Recommended Hunting Areas:** Smith Valley, Gleason Creek, and Bothwick Creek areas have the highest deer densities in the unit. There are also high road and hunter densities in those areas. Other good deer areas include Telegraph Peak, Paris Creek, Snow Creek, Taylor Canyon, Cottonwood Canyon, McDermid Creek, and Goshute Basin. Deer density decreases on the north end of this unit, but mature bucks can be found there.

**Biologist Comments:** Private property generally does not limit access in this area. Hunters do need to know where private property is located and obtain permission before hunting or crossing private property.
