

Species: Mule Deer

Unit Group: 131-134

Hunt Geometry ID: 32

Hunt ID: [885, 426, 214, 305, 238, 362, 239, 159, 158]

Access: Access is good to all hunting areas with no areas blocked by private land. There are many maintained roads and smaller jeep trails that require four-wheel drive vehicles. **Note:** Please be aware that sections of Unit 131, Unit 132 and Unit 133 are in designated Wilderness. Motorized equipment, mechanized transport, including wheeled game carriers and chainsaws, are prohibited in Wilderness. Contact the Federal Management Agency responsible for this area for more information.

Recommended Hunting Areas: Through mid-October, hunters should concentrate in the upper elevations of the White Pine Range, as this area has the highest densities of deer. Deer begin to migrate from unit 131 south into unit 132 in October; this migration is not weather dependent. Deer may concentrate in late October along Highway 6 and the White River junction and can also be scattered along the Horse Range and Grant Range. The southern mountain ranges have small resident herds at high elevations, primarily in Wilderness, with hunting improving later in the season at lower elevations as deer move in from northern areas.

Biologist Comments: The town of Ely has most supplies and a full range of services. Hiko and Lund have limited supplies and services. There are no services at Currant. There are campgrounds at Illipah Reservoir and White River in unit 131 and at Wayne E. Kirch Wildlife Management Area and at Cherry Creek in unit 132. Most of these campgrounds have tables and toilets but drinking water is not available. Primitive camping is allowed on public lands.
